

2
material may be used for each. It will be understood that if a certain number of the lamp-globes G are of blue glass and the others of red the light effect on the scenery of one series will be distinctly blue, while that of the other will be red, and that there will be no intermingling of the two tints.

5
Having now described my invention, what I claim as new, and desire to secure by Letters Patent, is—

10
In border or foot lights, a base composed of a trough of bent sheet metal adapted to sup-

port a series of lamp-sockets inside the same, a cover therefor having apertures registering with said sockets, lamps in said sockets, a hood on one side of said trough extending over the lamps and constituting a reflector therefor, and curved reflector-plates secured in said hood between the lamps, substantially as shown and described.

ANTON T. KLIEGL.
